DIY MASTER CHECKLIST

Collect water samples 4 times per year – 2 in winter and 2 in summer (during monsoon) after a significant amount of rainfall. You will also collect soil (irrigated and not irrigated) samples once a year.

Login to Project Harvest and create a new journal entry.

Significant rainfall = 1/10 of an inch of rainfall. You will use the provided rain gauge. Once you see 1/10 of an inch of rain in the gauge, you can sample. Empty rain gauge after every rainfall event.

WINTER

December 1 - February 28/29

You will collect a water sample AFTER the first significant rainfall in winter. Create a new journal entry with observations and images to projectharvest.arizona.edu between December 1 – January 6. If you do not have computer access, write observations in provided Project Harvest notebook.

Then, you will collect a water sample AFTER one of the last significant rainfall in winter. Create a new journal entry with observations and images to projectharvest.arizona.edu between February 15 - February 28/29.

If you do not have computer access, write observations in provided Project Harvest notebook.

MONSOON

June 15 - September 30

You will collect a water sample AFTER the first significant rainfall in the monsoon season. Create a new journal entry with observations and images to projectharvest.arizona.edu between June 15 - July 15. If you do not have computer access, write observations in provided Project Harvest notebook.

Then, you will collect a water sample AFTER one of the last significant rainfall event in the monsoon season. If you have not collected a soil or plant samples for the three previous collection periods, this is the time to sample! Create a new journal entry with observations and images to projectharvest.arizona.edu between September 8 - September 30. If you do not have computer access, write observations in provided Project Harvest notebook.
